

Mubadala Petroleum in Malaysia

Mubadala Petroleum has been present in Malaysia since 2010 and is operator of the offshore Block SK 320 containing three recent gas discoveries. Work is ongoing with PETRONAS and partners to evaluate all the options for commercializing the resources with focus on Pegaga while the other discoveries are being assessed in a phased approach.

Block SK320

**Exploration
Drilling**

- ▶ **Pegaga-1 well**
Drilled to a total depth of 2,029 meters, 247 meters gas column
- ▶ **Pegaga-2 appraisal well**
Drilled to a total depth of 2,685 meters, 850 meters gas column
- ▶ **Sintok-1 well**
Drilled to a total depth of 2,775 meters, 290 meters gas column
- ▶ **Sirih-1 well**
Drilled to a total depth of 3,000 meters, 293 meters gas column
- ▶ **M5-2 appraisal well**
Drilled to a total depth of 2,060 meters, delineated the reservoir extent

Moving Pegaga Forward

Mubadala Petroleum is committed to the development based around Pegaga and has the capability to do so. We are putting in place the additional resources required to fully define and progress the development in order to gain regulatory approvals and a final investment decision. We believe that Pegaga is among the largest discoveries of recent years in Malaysia. We are also continuing to explore growth opportunities within and outside Malaysia.

Building a world-class exploration and production business

Mubadala Petroleum is a leading energy company in the international upstream oil and gas business, recognized for the excellence of our people, partnerships and performance.
